

AkyPak[®]

Dunnage & Dividers

Internal Fittings & Dividers
Tailor Made protections for your products

Protect & organize your items with **custom-designed** separators and dividers

Introducing a world of customised protection and efficiency with our AkyPak® Internal Fittings & Dividers – the ultimate solution for safeguarding your products while optimizing accessibility.

Choose from a range of custom-designed packaging options, including rigid polypropylene dividers, foam divider sets, and corrugated plastic dividers laminated with non-woven fabric.

We always take care to protect your finished product or delicate parts during production, assembly, storage, and delivery.

Make **Transit Damage** a thing of the past

Experience a transformation in your shipping success! In-transit damage impacts up to 11 percent of all transported unit loads. Often perceived solely as a logistics challenge, the true origins of this issue may lie within your packaging design.

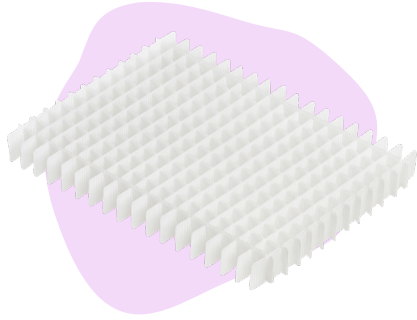

Let our expert team guide you in finding the optimal balance where your packaging is most efficient while being affordable. The ideal packaging solution takes into consideration various elements influencing in-transit damage, including product storage, material handling procedures, and the chosen mode of transportation.

Enhanced **Retrieval and Handling Experience**

Our self-assembling reusable boxes, trays and hand-held containers take up minimal space while in storage and are quick to assemble.

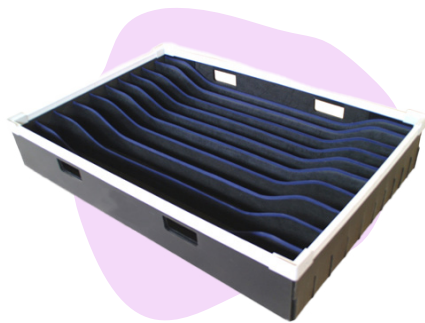

Polypropylene

The correct rigid dividers can transform metal racks or bulk containers into a highly efficient, highly protective packaging solution ensuring fast and safe retrieval of fragile items such as vials and glass bottles.

Textile

Textile dividers are an excellent choice to protect parts with a sensitive surface and unusual shape. This cost-effective solution allows a higher quantity of parts to be safely included in one packaging unit.

Laminated Polypropylene

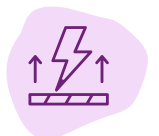

Laminated polypropylene dividers have the properties of rigid dunnage with the added softness required to protect and secure your products against any scratches.

Thermoformed Trays

Thermoformed trays allow us to produce tailored solutions to your needs and your products.

Specialized Treatments for Added Protection

For added protection, antistatic or Electrostatic Discharge (ESD) treatments can also be applied when shipping and storing static sensitive components or circuit boards. Your unique requirements are prioritized when crafting your partition solutions.

Commit to a **Circular Economy** with the **Plastics Recovery Program**

Our program creates a win-win partnership with our customers, allowing you to:

- > Improve your sustainability efforts
- > Reduce your plastic waste
- > Save money on disposal fees
- > Free up warehouse space
- > Get paid for your plastic waste

How does it work?

In short, the program consists of 4 key steps which are:

1. We ship our products to you to be used and **reused**.
2. At the end of their life, you return them to us.
3. We recycle and repurpose them into new goods.
4. We pay you for the goods that were returned to us.

Do you think Cardboard has a **lower environmental footprint** than Plastic?

Think again!

Our **Life Cycle Analysis** dispels the myth of Plastics being an unsustainable packaging material.
